

List of posters

Session 1 - Surface magnetic field and its interaction with convection

- R. Schlichenmaier [Effects of solar evolution on finite acquisition time of Fabry-Perot-Interferometers in high resolution solar physics](#)
- P. Lindner [The role of the chromospheric canopy in the formation of a penumbra](#)
- M. Benko [The evolution of sunspot magnetism and dynamics with the height in the atmosphere of the Sun](#)
- Y. Katsukawa [Doppler velocity variation toward the solar limb observed with HINODE SOT-SP](#)
- M. Kubo [Comparison of polar magnetic fields derived from MILOS and MERLIN inversion for Hinode/SOT-SP data](#)
- L. Rouppe van der Voort [Balmer H-epsilon observations of Ellerman Bombs in different types of regions](#)
- J. Zhao [Chromospheric recurrent jets in a sunspot group and their inter-granular origin](#)
- Y. Liu [Fan-shaped jet close to a light bridge](#)
- J. Crowley [Looking for variations in the photospheric structure throughout the solar cycle using Hinode SOT/SP](#)

Session 2 - (In)stability of the magnetized atmosphere: sources and evolution of energetic or eruptive events

Reetika Joshi	<u>Coordinated high-resolution observations of a flare-related surge</u>
A. Berlicki	<u>UV compact bursts – statistical analysis of IRIS Data</u>
Graham Kerr	<u>Flare ribbon fronts: the chromosphere's window on magnetic reconnection</u>
L. Kleint	<u>A Statistical Analysis of IRIS Bursts</u>
K. Krikova	<u>Diagnostic potential of Hϵ for small-scale energetic phenomena</u>
D. Kuridze	<u>Dark off-limb gap: manifestation of temperature minimum and dynamic nature of the chromosphere</u>
Xiaohong Li	<u>Coronal rain from lower solar atmospheric motions</u>
V. Liakh	<u>Numerical simulations of prominence oscillations excited by an eruption</u>
A. Bhatnagar	<u>Formation of the IRIS OI and CI lines in a flare</u>
S. Matthews	<u>Pre-eruption velocity evolution– what can it tell us about eruption onset?</u>
M. Murabito	<u>A comprehensive study of an Active Region filament using simultaneous GREGOR and IRIS data</u>

Session 3 - Tracing mass and energy flow between photosphere, chromosphere, and corona

S. Kianfar	<u>3D motion of the Ca II K bright fibrils in the Solar Chromosphere</u>
Eun-Kyung Lim	<u>Dynamical and Thermal Properties of RBEs and RREs derived from Imaging Spectroscopy</u>
P. A. Bourdin	<u>Model versus observation of Doppler shifts in the transition region and lower corona</u>
S. Gunár	<u>Prominence Tornadoes: Yes or No?</u>
Vartika Pandey	<u>Coronal heating terms and heat flux in a standard 1D atmospheric model</u>
D. Przybylski	<u>Simulation of the inter-network chromosphere</u>
Yamini K. Rao,	<u>Path Length Estimations in the Transition Region using IRIS</u>

- R. Robinson [Flux emergence without coherent structure: Toward understanding convection-driven magnetic reconnection](#)
- B. Schmieder [Multi-wavelength observations of a prominence observed by ALMA, IRIS and SDO](#)
- M. Skan [Unresolved fine structures and their chromospheric signatures in the simulated solar atmosphere](#)
- M. Stangalini [Spectropolarimetric signatures of MHD waves linked to FIP effect](#)
- L. A. Tarr [Spatio-Temporal comparisons of Hydrogen-alpha line width and ALMA 3mm Brightness Temperature in the Weak Solar Network](#)
- Andy S. H. To [Understanding the Correlation between Solar Coronal Abundances and F10.7 Radio Emission](#)
- S. Toriumi [Atmospheric Heating Mechanisms Common to the Sun and Sun-like stars](#)
- Y. Zhou [Prominence Oscillation and Eruption by Evaporation-Condensation Mechanism](#)
- P. Antolin [EUV & UV strands and variability associated with coronal rain](#)
- S. Ishigami [Study on the heating distribution along coronal loops using Hinode/EIS](#)
- J. Kašparová [Study of the White-light Emission During the X9.3 Flare on September 06, 2017](#)
- R. Kariyappa [Number Variation of XBPs with Solar Cycle 24](#)
- A. R. Kobelski [Transient Events in the Chromosphere and Corona with IBIS, ALMA, IRIS, and XRT](#)
- Kyoung-Sun Lee [Solar abundance fractionation in an active region related to the existence of the Alfvén wave in the chromosphere](#)
- S. M. Lezzi [Dark halos around Active Regions in the Solar Atmosphere](#)
- T. E. Moe [Effects of spatial resolution on inferences of atmospheric quantities from simulations](#)
- J. M. da Silva Santos [Subarcsecond imaging of a solar active region filament with ALMA and IRIS](#)
- S. Žabková [Cross-field temperature structure of AR 12981](#)

Session 4 - Fundamental processes: waves and turbulence, magnetic reconnection, particle acceleration, ion-neutral interactions

Sahel Dey	<u>Connecting dots between the Solar spicule and Polymeric jet</u>
Harsh Mathur	<u>Properties of Shock Waves in the Quiet Sun Chromosphere</u>
P. Schwartz	<u>On diversity of spectral shapes of hydrogen Lyman and Mg II h&k lines observed in a quiescent prominence by SoHO/SUMER and IRIS</u>
Q. M. Wargnier	<u>Multi-Fluid Simulations of Upper Chromospheric Magnetic Reconnection with Hydrogen-Helium mixture</u>
M. Zapiór	<u>Ion-neutral decoupling deduced from prominence spectral observations</u>
B. Fleck	<u>Acoustic-gravity wave propagation characteristics in 3D radiation hydrodynamic simulations of the solar atmosphere</u>
S. Imada	<u>Nonequilibrium Ionization Plasma during a Large Solar Limb Flare Observed by Hinode/EIS</u>
P. Jelínek	<u>Kink oscillation of prominence thread excited by vortex shedding</u>
J. Kotek	<u>Numerical simulations in Solar atmosphere using Discontinuous-Galerkin FEM code</u>
Hannah Kwak	<u>Detection of Alfvénic waves in the quiet Sun fibrils using spectroscopic data</u>
Momchil Molnar	<u>Center-to-limb variation of chromospheric wave fluctuations: comparison of observations with IRIS and 3D models</u>
D. Song	<u>Short-term Evolutions of a Transient Light Bridge revealed by High Resolution Spectral Data</u>
A. Zemanová	<u>Slowly positively drifting bursts in the 0.8-2.0 GHz range and SDO/AIA observations</u>
Ineke De Moortel	<u>(When) Can wave heating balance optically thin radiative losses in the corona?</u>

Session 5 - Novel approaches to data analysis

- A. Sainz Dalda [New tools to maximize the thermodynamic information return from the low solar atmosphere using IRIS data](#)
- E. Dzifcakova [KAPPA package and EUV diagnostics of the kappa-distribution in the solar corona](#)
- E. Dzifcakova [Carbon ionization equilibrium for kappa-distributions with the level resolved ionization and photoionization](#)
- H. Eklund [Investigating the impact of angular resolution on small scale brightening events by performing statistical estimations with a deep neural network](#)
- J. Koza [IRIS full-Sun mosaics: the sources of novel reference Mg II h and k profiles for radiative-transfer modeling](#)
- J. Martinez-Sykora [New insights into the transition region from IRIS observations and numerical simulations that include non-equilibrium ionization](#)
- I. Milic [Sparse Representation of HINODE SOT/SP Spectra Using Autoencoders](#)
- J. Tschernitz [Calibration of Hinode/NFI with SP data for datasets with large variations in the magnetic flux density](#)
- R. Centeno [Effects of the corrected Hinode satellite roll angle on the magnetic field quantities derived from observations of the SOT-SP instrument](#)
- D. F. Fouhey [Aiming Hinode in the Right Direction: How Pointing Could Change Your Science](#)
- N. Freij [IRIS and Python: Usertools and GUIs](#)
- L. Guliano [Status of Current Calibration Techniques and Data Products for Hinode's X-Ray Telescope \(XRT\)](#)
- Y. Kawabata [The pre-flight test and observation results of the Sunrise Chromospheric Infrared spectroPolarimeter \(SCIP\)](#)
- M. Sobotka [Measurements of Mg II Doppler velocities at two heights in the chromosphere](#)
- J. Velasquez [X-Ray Telescope python package - XRTpy](#)
- D. Vukadinovic [Atomic line parameters inference using a global spectropolarimetric inversion](#)
